KPI and OKR management

My career connects design, product and building. I started playing with code when I was 15 years old, and since then my approach has always been the same: understand the problem, prototype fast, measure and improve.

I consider myself a true Product Maker, a horizontal and complete profile. In any project that wants to move fast, you need people like this to gain real agility. I'm usually recognized for being fast, organized and for pushing ideas until they are in production.

My priority has always been to understand how things work and how different users actually use them.

I'm obsessed with deeply understanding the sector I work in, becoming an expert in it, and making sure both myself and the people I work with keep raising the bar for the team and the product.

WORK EXPERIENCE

Product Designer

North

10/2024 - Present

- Lead designer across four fintech products (web and mobile) focused on financial contracting, onboarding and management tools for B2B, B2C and B2B2C environments.
- Owner of consumer financing and eCommerce checkout flows for one of the largest banks in Spain, working on key payment flows and conversion optimization.
- Principal AI Product Designer in an internal AI squad: exploring and filtering AI tools for the team, building internal automations to accelerate other squads (prototyping, documentation, QA, research support) and contributing to the creation of new AI-driven projects for large clients.
- Accessibility Lead in the company, leading accessible handoffs for web and native apps in response to new market requirements.
- Direct collaboration with development: functional definition, edge cases, responsive behavior and implementation follow-up to ensure real delivery quality, not just "nice screens".
- Close work with Product Owners, Product Managers, developers and business teams to validate flows and meet financial and regulatory requirements.

Product Designer

Lowerton

03/2024 - 10/2024

- Lead designer of a new digital product from scratch.
- Defined brand structure and Design System.
- Designed user flows, sitemaps and architecture together with marketing and development teams.
- Built the MVP that helped the company enter Lanzadera, the startup accelerator led by Juan Roig.

UX/UI Freelance

08/2023 - 06/2024

- Designed and launched personal brand websites for entrepreneurs and small businesses.
- Created conversion-focused landing pages with marketing teams.
- Improved portfolios and digital identity with clear UX and modern visuals.

Full Stack Developer

Deusto Seidor S.A

03/2021 - 08/2023

- Designed and developed software solutions from scratch, including advanced document digitalization software using .NET, Angular and C#.
- Identified major UX problems and implemented improvements using a method called "User Vibing."
- Led a team of five specialists to refine flows and build user-centered features.
- Improved access to data and invoices and reduced load times by 15% in the "Synergy Bantec" platform.
- Conducted user research and usability testing to guide design decisions and improve product performance.

IT Technician

NSM Educational Center / Vitoria

03/2019 - 06/2019

- Redesigned and developed a WordPress system to manage educational resources and improve operational efficiency.
- Tested the platform with teachers and students, collected feedback and iterated improvements.
